

Function of the project: Tourism Building, Research Facilities

It is human's desire to conquer and understand nature .Over a long continuous improvement process ,people gradually get a grasp of the world ,thus one way or another try to benefit from nature without destroying it .This is considered a dream come true for us.

In many ways ,the king talal Dam is one such work ,a great structure of man which shows the desired progress as well as effort to protect the environment and ecological balance .With suitable solution ,the project goes beyond romantic visions of nature as something independent of human beings .

Why the project

Most visitors and residents have a negative impression about the King Talal Dam area , as an affected area not suitable for agriculture and visit .But on the contrary ,it is an area with stunning views and rare plants and fresh air need some special care .Mainly to increase the awareness of visitors and residents of the region towards the natural .The Need to provide a recreational areas for residents and tourists .Put an end to abuse against animals ,plants and aquatic environment change the misconceptions that spread in the local community and the tourist about natural locations and that need attention and to take care of

Why king Talal Dam

A journey to king talal dam is a journey to another world .A vast ,silent place ,timeless and starkly beautiful .king talal dam is one of Jordan main tourist attractions being the most stunning landscape in Jordan .The King Talal Dam is the largest dam in Jordan and a very important source of water and energy. The Dam is named after the King Talal for dedication to be a resemble of an iconic Symbolic of king Talal

Why this site

.Very high biodiversity and environmental system

. The outstanding views and nature around,

. In the other hand the weaknesses and issues in the site increase the opportunity to establish this project and that problem can characterize in:

.people usually go to unsuitable areas around for journeys to dangerous areas.

.Taking the“ Royal Botanic Gardens ”Concept into a new exciting approach to be described as Natural Operetta .

Lack of awareness about the natural life and the wrong use of agricultural production.

Purpose

this project will be an educational ,cultural ,environmental project

knowledge and understanding in architecture it will revive the environmental

importance of architecture in Jordan ,it will be an integration for future of dams ,
