

Story Board

.The story began with a dream , a dream to be artistic ,a dream to be creative ,to be an architect..

On the first two years knowing nothing but my faith and believe that this is the place to be. With curiosity and yearn to learn all about architecture starting from the principles of design , forming of shapes ... Etc, as the day passes by I become more aware of what I wanted .

On the third year philosophy and theories started to intersect with concept of our design as well as architectural heritage of the city and the types of ancient buildings which effected the ideas we were proposing.

- That was considered at the hotel project by using the shape of a column crown from Hatra Civilization where the project is located ,that was reflected at the interior design as well as the exterior .
- The hospital project present more realistic , economic and functional project without forgetting the mass forming of the building .
- Urban development in a historic place with very important landmark the mosque and shrine Al –Naby younis which has been exploded lately by terrorism ,the design was inspired by the old building types of the region to use inside courtyard ,solid elevation and Islamic decoration.
- The last year projects came to be more modern, contemporary and futuristic .new methods were involved like deconstructive & folding architecture which I used in the airport projet.
